

Result

By implementing Frontról's PACE, the organization transformed how it delivers complex projects across the globe.

With more than 50,000 active projects and 25,000+ users now on the system, teams report dramatic improvements in project visibility, decision-making speed, and cross-functional collaboration. Project teams spend less time managing disconnected data and more time delivering results. Stakeholders now have a single source of truth — improving confidence, accountability, and execution at every level.

Conclusion

PACE delivered more than just a technology upgrade—it redefined how the enterprise executes projects. By aligning teams around a centralized platform, PACE enabled standardized practices, reduced administrative burden, and empowered real-time decision-making across geographies and disciplines.

This shift allowed the organization to scale with control, eliminate costly inefficiencies, and consistently deliver high-performance outcomes—no matter the size, location, or complexity of the project.

Transforming Global Project Delivery with PACE

A global engineering and infrastructure firm managing projects across 80+ countries sought to modernize its project management capabilities.

The organization faced persistent challenges with disconnected teams, siloed systems, and limited transparency, all of which impacted productivity.

Challenges

Project teams were burdened with siloed systems for cost, schedule, risk, and reporting—primarily Excel-based. This fragmented environment caused delays, inconsistencies, and decision-making blind spots. Lack of standardized processes increased manual effort and obscured executive-level visibility.

Key Outcomes

One View for the Entire Project

Project managers, cost engineers, and schedulers work from a unified platform—no more jumping between disconnected systems or tracking down data in Excel.

More Time Spent on Execution, Less on Admin

Automation handles routine tasks like updates, approvals, and reporting—freeing teams to focus on delivering outcomes, not managing spreadsheets.

Faster, Confident Decision-Making

Standardized processes and data flows reduce guesswork. Teams can trust the information they see, streamlining approvals and accelerating project reviews.

Supports the Full Project Lifecycle

From initial planning to final closeout, PACE provides functional tools for estimating, scheduling, forecasting, progress tracking, and change management.

Consistent Delivery Across Teams & Regions

Built-in workflows ensure everyone—from the field to the boardroom—is aligned with the same processes, expectations, and project data.

Flexible for Any Project Type

Whether you're managing a portfolio of small jobs or a single billion-dollar mega-project, PACE adapts to fit the complexity and pace of delivery.

Enterprise Impact

The solution now supports more than 50,000 active projects and 25,000+ users. Adoption has spanned regions and disciplines, with users reporting significant improvements in usability, efficiency, and overall confidence.

End-User Feedback

EACs are so much easier in Workbench... It makes me actually enjoy being a PM. Also, the project setup process is super easy!"

Project Manager, MiddleEast Highways

Loving the risk register module!"

Project Manager, US East Region

This tool saves me a ton of time and has so many great new features—it's awesome!"
