- Innovative use of data using our bespoke technology provides predictability and consistency
- Working with the sustainability and social value experts within the business, measures for environmental, social and governance performance combined with project data to ensure project objectives are met

# OUR CLIENT TESTIMONIALS

## Highways

"PPS embodies all of our values; (their) confidence and drive to get things moving has resulted in so many outstanding lingering actions being completed.

We've had many contentious issues on the project and PPS has taken a real leadership role in it, ensuring the actions are dealt with and handled to the highest of standards. They have great management and interpersonal skills; being able to join a team at such a late stage and bring everyone on board and moving in the same direction is not an easy task, and (they) have flourished at this."

## Local Transport

"There is an excellent working relationship with the PPS team to deliver this challenging project in challenging times."

## Aviation

"Great creative and lateral thinking, great consideration of business requirements, clearly taken the challenge and feedback from deep dive sessions very constructively. Impressed with the extent to which the team worked closely with the engineering and asset managers in the business units to develop and hone the options to ensure it was focussed in the right areas. All this and already a potential saving of 10 to 20% identified against the budget, which provides further confidence we can meet the capital challenge we face with this kind of thinking. Great stuff. Well impressed. How it should be."

## Rail

"PPS strive for the best and (their) actions have led to exceptional outcomes. (They) were commended for their project management skills and (their) delivery of excellence in challenging circumstances. (Their) ability to effectively manage stakeholders was highly praised, and (their) collaborative team spirit shone."

"Great creative and lateral thinking, great consideration of business requirements, clearly taken the challenge and feedback from deep dive sessions very constructively."
